Interactive calculators

On-screen emulators for primary school calculators

Just like the real thing.

Interactive whiteboard calculator emulators run on a personal computer and they look and operate just like most primary school 4-function calculators.

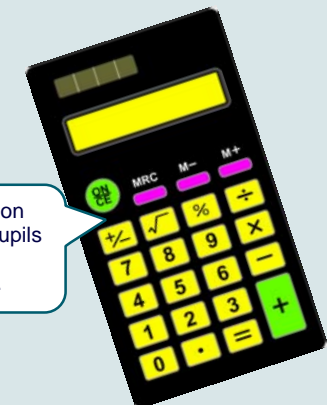

When the PC is connected to an interactive whiteboard, all the class can see the keys being operated and the results that they get.

Calculations are recorded and can be displayed or hidden.

Operates just like the most common primary calculators.

Memory and constant contents can be displayed or hidden.

High-resolution options for pupils with visual impairments.

What's in the memory?

Difficult concepts, such as using constants and the memory function, are made easy to understand when you can see what's happening inside the calculator.

How did I get the answer?

Key presses are recorded and can be reviewed and printed out from the calculation panel.
